The "value" attribute specifies the value sent when the radio button is selected.

Example:

```
<label for="male">Male</label>
```

```
<input type="radio" id="male" name="gender" value="male">
```

```
<label for="female">Female</label>
```

```
<input type="radio" id="female" name="gender" value="female">
```

### Checkboxes (<input type="checkbox">):

Checkboxes allow users to select one or more options from a list.

Each checkbox is independent and can have its own "name" and "value" attributes.

Example:

```
<label for="subscribe">Subscribe to Newsletter:</label>
```

```
<input type="checkbox" id="subscribe" name="newsletter" value="yes">
```

### Textarea (<textarea>):

Textareas are used for multi-line text input.

They do not have a "type" attribute but can have "name" and "id" attributes.

The content between the opening and closing <textarea> tags defines the default text.

Example:

```
<label for="comments">Comments:</label>
```

```
<textarea id="comments" name="comments" rows="4" cols="50">Enter your comments
```

### Dropdown Lists (<select> and <option>):

Dropdown lists are used to select one option from a list of options.

dropdown list, and <option> elements define the option
